November 13<sup>th</sup> 2009

**ENTEK ENERGY ANNOUNCES OIL AND GAS SHOWS AT ROBIDOUX 13-15T  
WELL CURRENTLY DRILLING IN MOFFAT COUNTY COLORADO**

**Highlights**

- The well has been drilled to 5,725 feet rotary table (RT) (at 3:00 AM Friday Nov 13 WST) and has penetrated geologic sections as predicted.
- Good hydrocarbon shows have been intersected in the well:
  - Gas charged coals were intersected in the Mersaverde Sequence
  - The Hatfield Sandstone had significant gas and oil shows
  - The Deep Creek Sand appears gas charged with oil shows
  - The Mancos Formation is fractured and has good gas and oil shows
- After drilling through to ~ 6,200 feet measured depth (MD), electric logs will be run over the interval 720 – 6,200 feet MD to define the hydrocarbon intervals and reservoir quality, 7 inch casing will then be run to approximately 6,200 feet MD.
- Drilling will then resume, using an under-balanced system, into the Niobrara Formation, where ENTEK tested significant oil and gas from the Focus Ranch 12-1 well in August this year.
- Testing of all pay intervals will be conducted after the well has reached its total depth (TD) around 7,700 feet MD and after log analysis is completed.
- ENTEK confirms that based on the successful results to date in the 13-15T well, the Battle Mountain 14-15 well is planned to be drilled immediately activity on the 13-15T well is completed, using the same rig and services.

**Chief Executive Officer's Comments**

"The early results are very encouraging and confirm a number of play types with good oil and gas shows exist at the Slater Dome Structure. These results from the 13-15T well follow our very successful testing of oil and gas from the Upper Niobrara in the Focus Ranch 12-1 well in August this year and would seem to confirm the significant oil and gas prospectivity over the entire acreage position. The well is located adjacent to our existing facilities which would allow immediate tie in to market for the produced oil and gas."

## BACKGROUND

On June 26th 2009, ENTEK announced a conditional offer to earn up to 55% of New Frontier Energy Inc.'s (NFEI) interest in a large acreage portfolio (approximately 66,000 acres) in the Green River Basin in Colorado and Wyoming in the USA had been accepted subject to completion of documentation.

On August 13<sup>th</sup> 2009, ENTEK announced that a farm-in agreement had been executed.

ENTEK commenced the farm-in program immediately following execution, performing work-overs of wells on the Slater Dome Field and a successful test of oil and gas from the Focus Ranch 12-1 well. The drilling of the Robidoux 13-15T and Battle Mountain 14-15 wells is a continuation of the farm-in program.

## Competent Person's Statement:

Information in this report that relates to Hydrocarbon Reserves and or Resources is based on information compiled by Mr Russell Brimage, Chief Executive Officer of Entek Energy Limited who has consented to the inclusion of that information in the form and context in which it appears.

Mr Brimage has over 30 years experience in the application of engineering to the petroleum industry in oil and gas exploration and production, both in Australia and internationally, as either an employee or consultant to oil companies operating in the upstream petroleum industry. Mr Brimage directs the Company's operations with the help of various professional consultants, appropriately qualified and experienced in their respective fields within the upstream petroleum industry. He is also an Associate Member of the Society of Petroleum Engineers.
